

# COUNTERTOP CARE AND MAINTENANCE

---

## GRANITE & QUARTZ

Granite and Quartz countertops are virtually maintenance free and can be cleaned with ease. If a spill occurs, blot the area with a paper towel, as wiping will cause the spill to spread. On the rare occasion that a stain is left, flush the area with plain water and mild soap several times and dry thoroughly with a soft cloth.

Clean surfaces regularly with mild soap and water or a store bought cleaner designed for use on granite and natural stone. Thoroughly rinse and dry all types of countertop surfaces after washing.

## GRANITE COUNTERTOP CLEANING TIP

Keep granite looking new for years by wiping frequently with either a granite and stone cleaner, a mild soap and water mix, or an ammonia-free window cleaner.

## BADLY-SOILED COUNTERTOPS

To clean badly soiled countertops, apply a solution of scouring powder and very hot water. Let stand for five minutes, then scrub and rinse.

## DO NOT USE

- Cleaners containing ACID (bathroom cleaners, grout cleaners, tub and tile cleaners) on any stone countertop
- Cleaners with AMMONIA on any stone countertop
- LEMON JUICE or other cleaners containing ACID on marble, limestone, travertine or onyx surfaces
